Professional Summary

Experienced React Native Developer with 5+ years of expertise building and maintaining scalable, production-grade mobile applications for 250K+ users. Proficient in TypeScript, Redux Toolkit, React Query, and native module integrations. Skilled in full-stack development with Node.js, Hono, Cloudflare Workers, PostgreSQL, and MongoDB. Successfully led major version migrations (v0.68 → v0.76) and implemented zero-downtime deployments, UI/UX redesigns across 20+ screens, and secure API integrations including payment processing.

Experience

- 02/2024 – Present

Revature, *Associate Developer*
React Native Developer | Brightspeed

 - Maintained and enhanced a production account management mobile application serving 250,000+ active subscribers.
 - Led a major version migration from React Native 0.68 to 0.76.6, adopting the New Architecture (Fabric/TurboModules) with zero downtime and preserved user states.
 - Redesigned 20+ screens with modern UI/UX patterns, improving visual consistency and user engagement.
 - Integrated 40+ RESTful APIs across multiple service layers, including secure bill payment, account management, and real-time data synchronization.
 - Reduced production crashes by implementing Error Boundaries with fallback UI components, significantly improving app stability.
 - Optimized application startup time, reduced JavaScript bundle size, and enhanced FlatList rendering performance and memory management for large data sets.
- 02/2023 – 02/2024

Cendrol, *Full Stack Mobile Application Developer*

 - Built two production mobile applications from scratch—**Procurement App** and **Partners App**—using React Native, Node.js, Express, MongoDB, and PostgreSQL.
 - Implemented end-to-end authentication (JWT/OAuth) with role-based access control for procurement managers and partner vendors.
 - Integrated push notifications for real-time order updates, approvals, and partner communications.
 - Integrated device-native features including camera capture, file uploads (images/documents), and media storage.
 - Managed end-to-end store deployments on Apple App Store and Google Play Store, including build configurations, code signing, and release management.
 - Architected RESTful APIs with Node.js and Express, with MongoDB and PostgreSQL databases for scalable data management.

Technical skills

React Native, React, TypeScript, JavaScript, Redux Toolkit, React Query, Reanimated, Gesture Handler, AsyncStorage, Node.js, Express, Hono, MongoDB, PostgreSQL, MySQL, SQLite, Cloudflare Workers, GitHub Actions, Git, Android Studio, Xcode, Linux, Bash

Certifications

- Complete React Native in 2023: Zero to Mastery
- Node.js, Express, MongoDB & More
- Microservices with Node.js and React

Key Highlights

- Production app with 250K+ downloads
- Migrated React Native 0.68 → 0.76.6
- Integrated 40+ REST APIs
- Redesigned 20+ production screens
- Built Android & iOS apps from scratch

Projects

Brightspeed app

Android [🔗](#) and iOS [🔗](#)

- Built and maintained a React Native mobile application serving 250,000+ Brightspeed internet subscribers.
- Implemented over-the-air (OTA) updates and version rollouts with zero production downtime while preserving user session states.
- Redesigned the UI/UX across 20+ screens using React Native's component-based architecture, and integrated multi-layered REST APIs—including secure bill payment gateways—to deliver a seamless cross-platform experience on both iOS and Android.
- Successfully migrated Brightspeed's React Native app from v0.68 to v0.76 (New Architecture).

BumpDaily

- Built and deployed a full-stack production mobile application using React Native for cross-platform frontend, with Hono and Cloudflare Workers powering the serverless backend architecture.
- Designed and implemented RESTful APIs using **Hono**—a lightweight, ultrafast web framework—running on **Cloudflare Workers** for edge computing with sub-millisecond response times.
- Leveraged **Cloudflare R2** for scalable, cost-effective object storage—handling media uploads (images, documents, videos) with secure, signed URLs and CDN-backed delivery.
- Architected a serverless infrastructure eliminating traditional server management overhead, enabling automatic scaling, high availability, and global low-latency performance.
- Implemented JWT-based authentication and middleware for request validation, rate limiting, and CORS configuration within the Cloudflare Workers environment.
- Published the application to both **Apple App Store** [🔗](#) and **Google Play Store** [🔗](#), managing build configurations, code signing, app store compliance, and release cycles.
- Integrated CI/CD pipelines for automated builds, testing, and deployments to both app stores and Cloudflare Workers.

Partners App

- Built a lead generation mobile application for real estate partners to submit land sale information directly from the field.
- Designed intuitive forms with dynamic fields for capturing property details—location, area, pricing, ownership documents, and contact information.
- Built a partner dashboard with real-time submission tracking, status updates, and commission/earnings visibility.
- Implemented push notifications to alert partners about lead approval, rejection, or follow-up requests.
- Secured sensitive partner and property data with JWT authentication and encrypted storage.

Procurement App, *React Native | Node.js | Express | MongoDB*

- Built a mobile application for site engineers and project managers to track construction build status and request building materials/products.
- Implemented product/material request workflows—engineers can request items (cement, steel, electrical, plumbing, etc.) with quantity, delivery date, and site location.
- Enabled photo uploads for site progress documentation, with status updates attached to each project milestone.
- Implemented push notifications for request approvals, procurement status updates, and delivery confirmations.
- Designed real-time inventory visibility, showing available stock levels before placing requests.
